Description

DigitalBank is a modern digital banking company focused on simplifying personal finance through innovative technology. Designed for individuals who want full control over their money, DigitalBank offers secure and intuitive solutions for everyday banking, budgeting, savings, investments, and payments—all accessible from a single mobile-first platform.

The company already has the website layout ready for desktop resolution, and you are now tasked with implementing this site, with the challenge of making it responsive and interactive for clients.

You will have 3 hours to develop this module, and the delivery should be accessed at the address: http://xxxxxxxxx/yy_DESIGN_IMPLEMENTATION, where yy is the code of your country.

Project and tasks

This module consists of implementing the responsive website design provided in the assets, using the following screen widths as reference:

- Desktop: 1366px
- Tablet: 768px
- Mobile: 396px

Your challenge is to build out this landing page and get it looking as close to the design as possible.

The only JavaScript required is for the mobile navigation toggle. However, you could also try doing this without JS.

The users should be able to:

- View the optimal layout for the interface depending on their device's screen size
- See hover and focus states for all interactive elements on the page

The style-guide.md file provided on the media folder is where you'll find colors, fonts, etc.

Instructions for the competitor

- The website should follow as identical to the provided layout on Chrome and Firefox
- Keep your code as readable and organized as possible, using the development standards for HTML5 and CSS3 development
- The use of JavaScript is allowed without the use of libraries or frameworks.
